

JCU Ideas Lab, Cairns

Paul Newman

Architect, Wilson Architects
B. Des Arch., B. Arch. Rego no. 4929

Striving to achieve the best possible outcome for clients, Paul understands the importance of concise documentation, attention to details & clear communication to delivering a project successfully.

Having a lifelong interest in all forms of art and creative design, the opportunity to explore and combine aspects from many disciplines into singular outcomes is what led Paul to a career in the practice of architecture.

Paul's key architectural interests center around the role that the built environment plays in affecting the wellbeing of its inhabitants, particularly as it relates to quality of experience. Paul has a strong belief that the act of practicing thoughtful spatial planning and considered choice of materials are essential to accomplishing this.

Paul graduated QUT Master of Architecture in 2011. Paul has over 15 years of previous experience in design offices both in Australia & overseas. Thanks to his extensive experience, Paul has worked on a variety of projects, scaling across residential, commercial & education sectors.

During his career, Paul has performed roles as both project architect and as a design team member as well as being involved in all aspects of the design process from initial briefing to contract administration.

Since becoming a part of the Wilson's team in 2017 Paul has worked on student housing & innovation projects for James Cook University & University of Queensland. Involvement in these projects has led to the broadening of his construction knowledge, especially within the particular characteristics that are associated with building in regional areas.

RELEVANT PROJECT EXPERIENCE:

Laboratories + Research

University of Queensland

– PC3 Labs Refurbishment

Tertiary Education Projects

James Cook University
